Project Purpose and Real World Application 10 points	Video does not explain project context	Video briefly explains project purpose- no real world connection	Video explains that model predicts weather probabilities, but context is missing	Video clearly explains the purpose and connects it to weather forecast uncertainty	Video clearly and thoroughly explains the project goal, why probability estimation matters, and how it applies to real world forecasting
Calculus Applications 15 points	Missing connection to calculus	Mentions calculus terms but does not explain them	Mentions and explains CDF and PDF, but misses other concepts	Mentions different applications of calculus in the machine learning process and outputs	Explains and demonstrates how calculus is used through the entire process, from training to output i.e. gradients, Hessians, CDF, optimization, etc
Machine Learning Model and Forecasting Error 15 points	Model is not mentioned or explained	Mentions machine learning and model name but does not explain process	Defines forecast error and gives a basic explanation of the model	Clearly explains model outputs and what the model is aiming to optimize	Clearly explains how the model works and generates outputs, both intuitively and mathematically Directly explains NGB, DGB, GB, and outputs
Methodology 10 points	Project creation is not explained	Briefly mentions data and process	Goes through architecture and mentions data	Explains core functions and files and shows data collection	Goes through project production pipeline, where data

				process	was collected, how it was cleaned and processed, and explains why features were included and sources of data
Final Product: Video+ Python Demonstration 10 points	Video or python demo do not exist	Demos exist but are unclear and low quality	Shows some code, visuals, and explanations	Visuals clearly relate to the topic they explain Video shows technical depth	Video fully covers all necessary topics-length>20 minutes Shows clear depth of knowledge and understanding Visuals clearly show topics communicated
Timeliness 5 points	Everything is very late	Somethings are very late	Somethings are late	Most things are on time	Nearly all are on time
Total points: 65
